

PARTNER BRIEF / AUGUST 2026

From digital country to sovereign compute.

A lawful, staged fieldworks program that turns Tommy's live civic platform into an independently powered physical node.

\$60,078

first permission + proof release

HAMBURGERLANDIA.QUEST

The country is live software—not a landing page.

Citizenship, records, offices, law, appointments, parcels, titles, projects, and one Tommy profile already operate as a connected public system.

Tommy's intended public presence

CIVIC OPERATING LAYER

Applications become durable records. Public offices and law shape what the platform can do.

EVIDENCE LAYER

Milestones, permissions, expenses, risks, and published proof reconcile to one ledger.

PHYSICAL LAYER

The next step is measured power, resilient compute, lawful site control, and field evidence.

The advantage: the public can watch a country earn credibility one verified milestone at a time.

One Tommy. Six public doors.

A 24/7 show format connects stories, games, tabletop worlds, civic fiction, art, and partner-ready media.

24/7

show format

69

browser games

24 / 2,500

series / episodes

420

Bunfight cards

WATCH — Tommy Live

Stories, games, music, readings, guests, and new work in one continuous format.

READ — Books and episodes

Illustrated books and searchable episodes across 24 complete written series.

PLAY — Browser arcade

A 69-game arcade, with Stop Tommy and the mobile games kept separate.

BRING A TABLE — Bunfight + Mirrorfall

A 420-card game and a separate RPG connected to the nine-volume Codex.

ENTER — Hamburgerlandia

Tommy's civic world, connected to separate market and fund destinations.

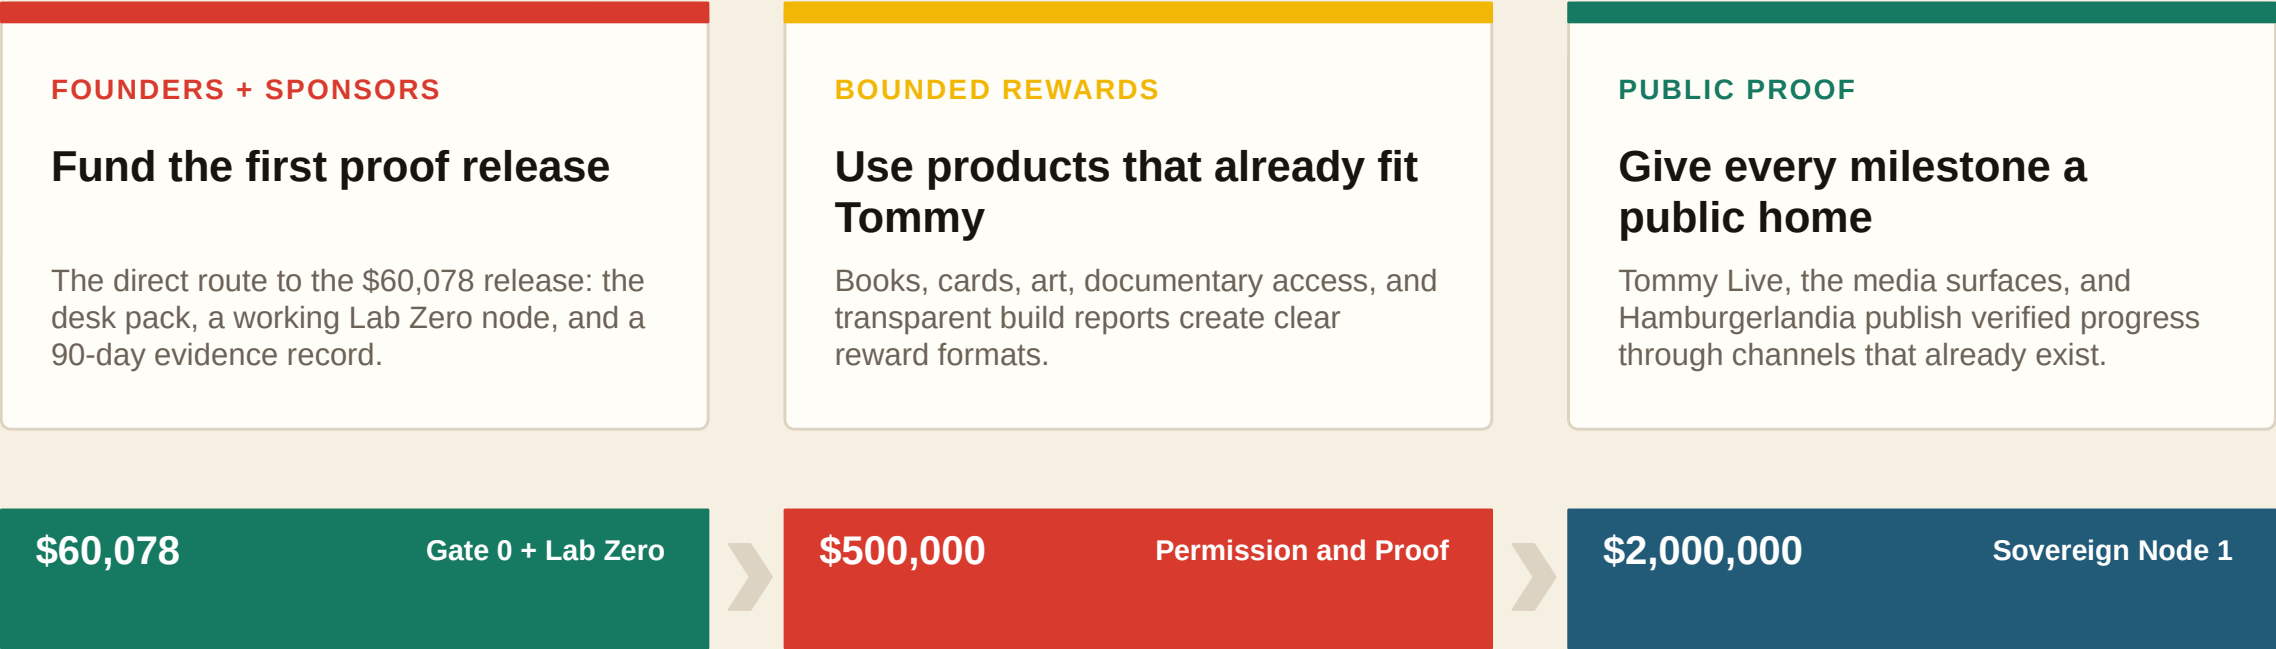

MAKE + SHARE — Meme Lab and art

A working Meme Lab, art, clips, press material, goods, and official profiles.

Different doors. One recognizable character.

Use the universe to fund proof—not promises.

The \$60,078 Permission + Proof release funds a Gate 0 legal and cadastral desk pack, an off-site Lab Zero evidence node, and a 90-day evidence record.

\$2,500,000 first program target. Each later step remains gated by permission and measured evidence.

Support does not buy land, a parcel, title, office, citizenship authority, access, ownership, recognition, profit, or permission.

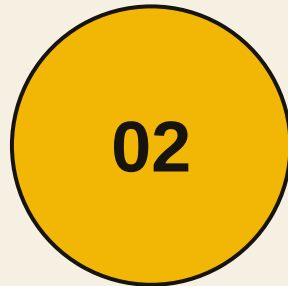

Sovereignty is an operating capability.

Tommy does not need magical legal immunity. He needs control of the systems that keep his work alive.

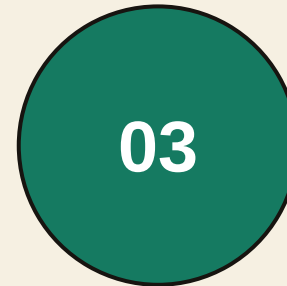

SOFTWARE

Identity, services, automation, and public operations

DATA

Records, model weights, creative assets, and history

POWER

Solar generation, storage, and graceful load shedding

RECOVERY

Geographic backups, failover, and tested restoration

Operational sovereignty means continuity under Tommy's control. It never means exemption from property, aviation, environmental, construction, tax, or securities law.

A claim is not permission to occupy, fly, or build.

The disputed Danube area remains under state control. Hamburgerlandia advances through evidence, lawful access, and written approvals.

CURRENT FACT

Croatian authorities state that the right-bank delimitation zone is not terra nullius and remains subject to Croatian and European law.

Source: Croatian Ministry of Foreign and European Affairs

LAND

Identify the exact parcel, title, owner, access route, and legal interest.

FLIGHT

Use an authorized operator with the applicable airspace and imaging clearances.

ENVIRONMENT

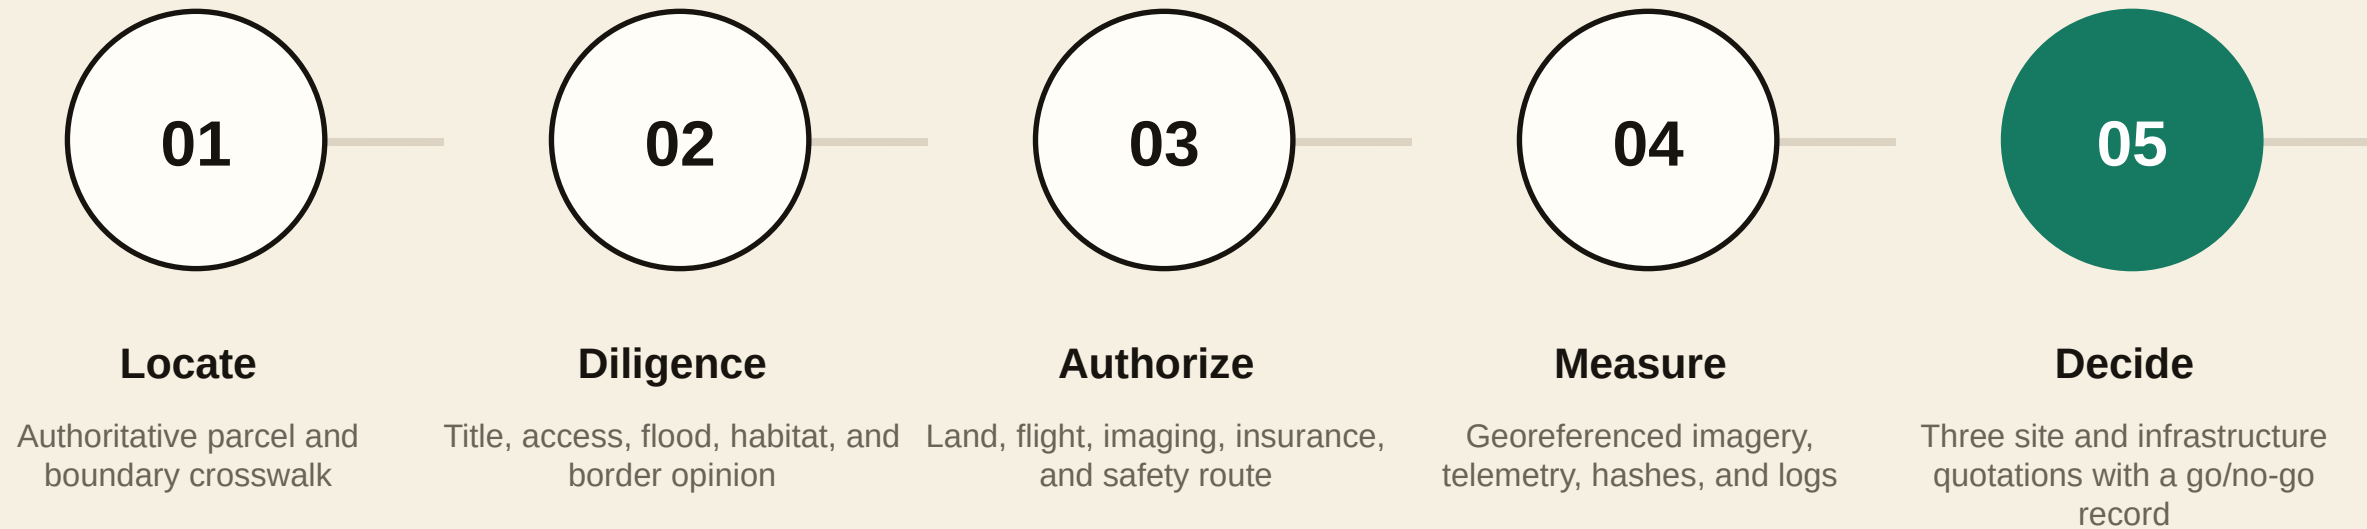

Screen flood exposure, protected areas, habitat, and site-specific restrictions.

BUILD

Secure written legal interest, professional designs, and a final effective permit.

Permission and proof before deployment.

The first field release produces decision-grade evidence. It does not attempt an occupation.

Stop immediately if the exact parcel, access right, authority path, or safe recovery route cannot be proved.

Prove the machine before the land.

A small node on controlled property can create a 90-day operating record while parcel and permission work proceeds in parallel.

1.2 kWp

solar array

10 kWh

nominal LFP storage

30 W

continuous local load

90 days

measured operating proof

\$30,894 BASE

Power, storage, shelter, communications, instrumentation, commissioning, and reserve.

WHAT IT PROVES

Availability, thermal behavior, connectivity, recovery, maintenance, and real seasonal energy assumptions.

Design for December—not the annual average.

Representative PVGIS data near Apatin shows why the first sovereign node must stay small, modular, and measured.

1 kWp solar
December day

20 kWp solar
December day

1 kW load
per day

5 kW load
per day

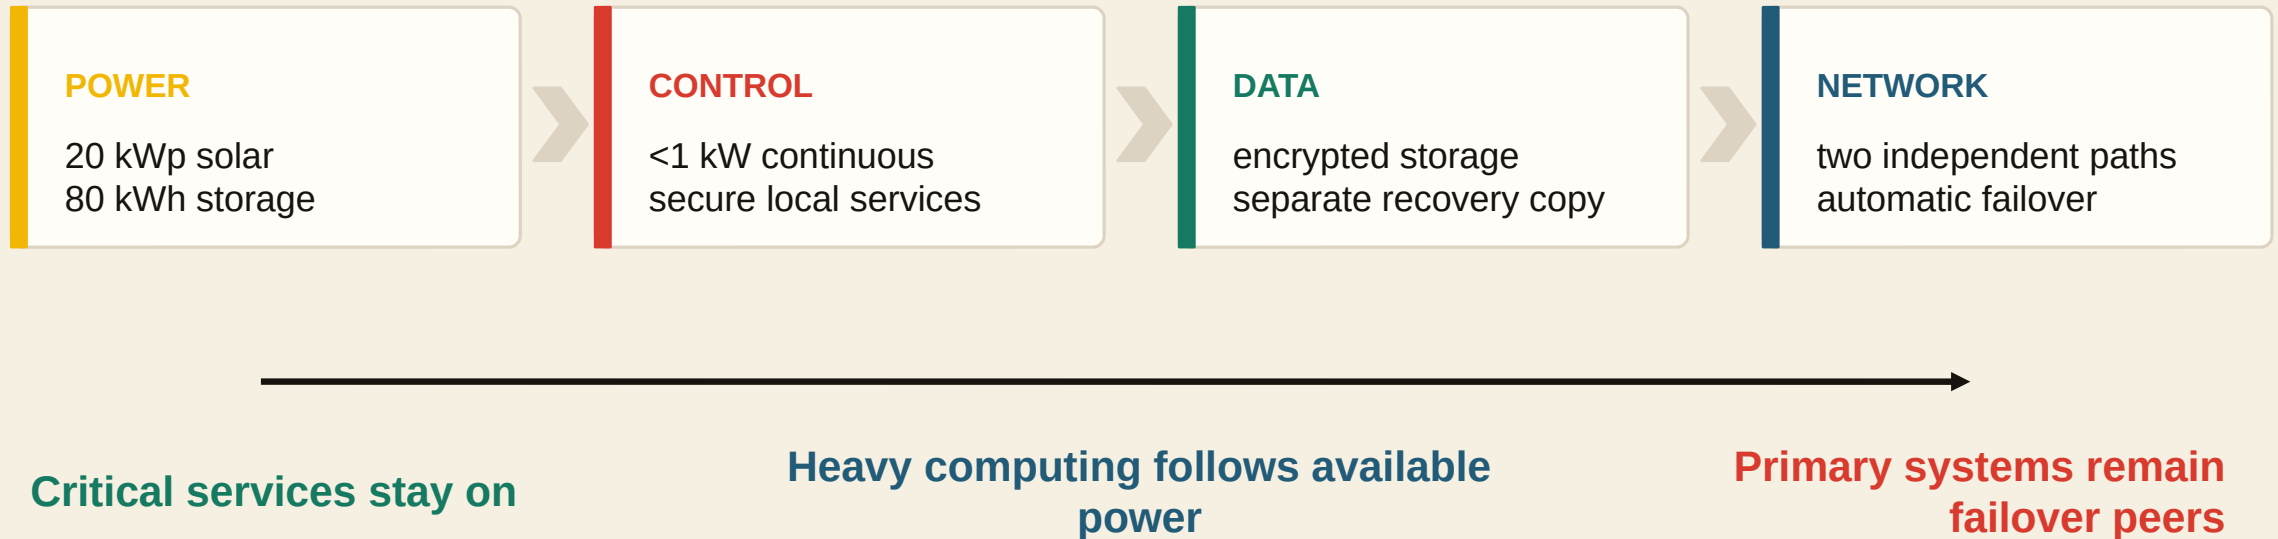

THE DESIGN RESPONSE

Keep the control load below 1 kW. Run heavy jobs in solar surplus. Protect records, communications, and safety first.

Source: European Commission PVGIS 5.3 reference model

A resilient control plane—not a brute-force GPU barn.

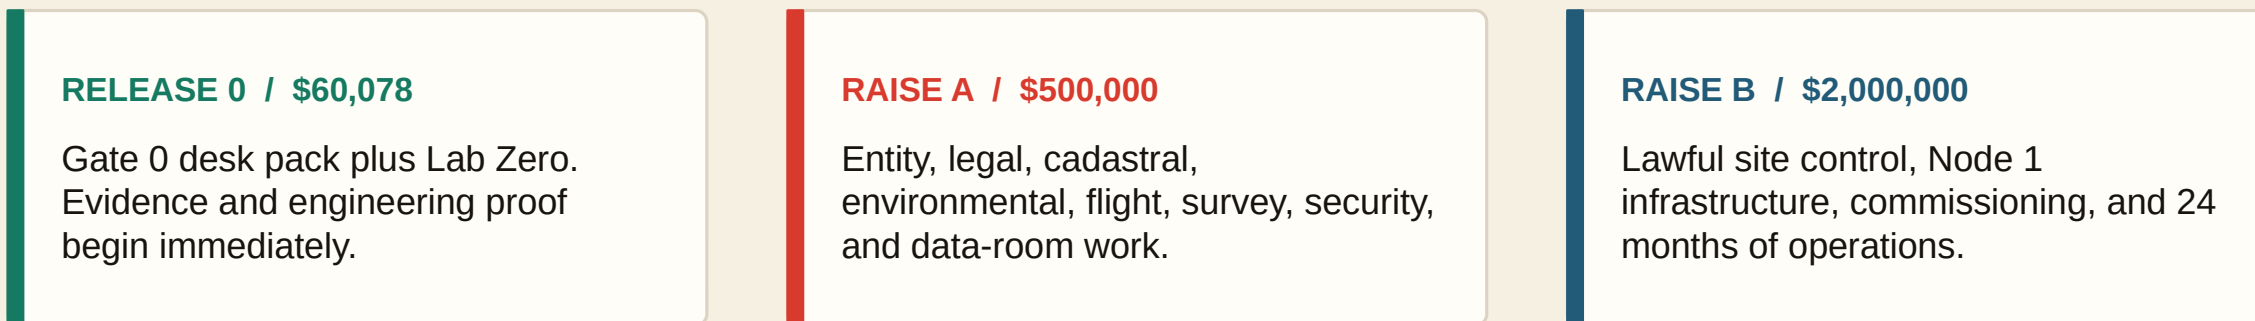

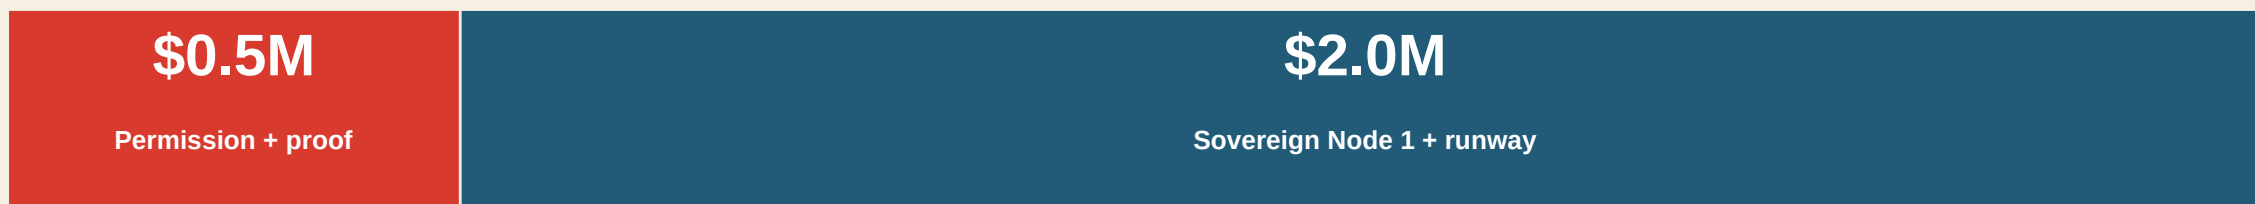

The first field node keeps Tommy operating through outages, network loss, and maintenance while larger computing remains distributed.

Scale only after 90 days of measured availability, energy, temperature, network, and recovery performance.

\$2.5 million, released by proof.

The full program funds permission, evidence, and a 24-month Node 1 operating runway. The immediate ask is the contained first release.

The later 5 kW micro data center is a separate \$4–6 million decision after Node 1 produces measured proof.

Start simple. Raise complexity only after proof.

The capital path becomes more sophisticated only as entity, disclosure, land, and operating proof mature.

01

Founder + sponsors

Fastest path to the \$60,078 proof release. No ownership or profit promise.

02

Bounded rewards

Books, cards, art, documentary access, and transparent build reports.

03

Compliant equity

Regulation Crowdfunding can support up to \$5M through a registered intermediary.

04

Croatian incentives

Potential support for eligible Croatian businesses after thresholds and pre-application rules are met.

No funding round sells citizenship authority, land rights, titles, parcels, or token appreciation.

Turn the thesis into measurements.

Every workstream ends in evidence a partner can inspect.

WEEKS 1–2	Desk pack	Counsel scopes, parcel crosswalk, authority map, assumptions register
WEEKS 2–6	Lab Zero build	Power system, telemetry, secure services, recovery runbook
WEEKS 4–10	Diligence	Title, access, flood, habitat, aviation, imaging, and insurance matrix
WEEKS 6–13	Measured run	Availability, energy, thermal, network, and recovery evidence
Day 90 decision	Proceed, redesign, relocate, or stop—based on measurements and permissions rather than mythology.	

DECISION REQUESTED

Fund the \$60,078 Permission + Proof release.

It buys the Gate 0 legal and cadastral desk pack, a working Lab Zero node, and a 90-day evidence record.

hamburgerlandia.quest

PARTNER ROLE

Name one commercial owner and one technical owner for kickoff.

FIRST WORKING SESSION

Confirm funding vehicle, release gates, evidence access, and weekly reporting.

WHAT HAPPENS NEXT

The first verified milestone appears in the public country ledger.

Everything everywhere all at once—built one provable layer at a time.
